

PlayMechi Matchmaking Dashboard Plan

1. Product Direction

PlayMechi should be built as a dashboard-first matchmaking platform.

The public website should explain the product, market the brand, and bring users into the dashboard. The dashboard should be where all player activity happens.

Core Principle

Public pages explain PlayMechi.
The dashboard runs PlayMechi.

Public Pages

Public pages should support the product but should not contain the main player activity.

Recommended public pages:

```
mechi.club/  
mechi.club/home  
mechi.club/how-it-works  
mechi.club/pricing  
mechi.club/tournaments  
mechi.club/support  
mechi.club/download  
mechi.club/terms-of-service  
mechi.club/privacy-policy
```

Dashboard Pages

All logged-in activity should happen inside:

```
mechi.club/dashboard
```

Dashboard routes should include:

```
/dashboard  
/dashboard/play  
/dashboard/challenges
```

```
/dashboard/matches  
/dashboard/matches/[matchId]  
/dashboard/tournaments  
/dashboard/leaderboard  
/dashboard/games  
/dashboard/game-ids  
/dashboard/results  
/dashboard/disputes  
/dashboard/rewards  
/dashboard/socials  
/dashboard/subscription  
/dashboard/payments  
/dashboard/profile  
/dashboard/notifications  
/dashboard/support
```

Admin Dashboard

Admin tools should be separate:

```
/admin  
/admin/users  
/admin/matches  
/admin/challenges  
/admin/results  
/admin/disputes  
/admin/tournaments  
/admin/games  
/admin/subscriptions  
/admin/payments  
/admin/reports  
/admin/moderators  
/admin/content  
/admin/analytics  
/admin/settings
```

2. Main Product Positioning

Short Positioning

PlayMechi is the competitive gaming dashboard for African gamers.

Main Headline

Challenge players. Find matches. Climb the ranks.

Supporting Message

PlayMechi helps gamers create challenges, find opponents, join tournaments, submit results, track stats, climb leaderboards, and build a verified competitive gaming profile.

What PlayMechi Is Not

PlayMechi should not feel like only a tournament flyer website.

It should not feel like a gambling app.

It should not depend on cash-stake matches at launch.

It should not start with custom Ludo yet.

What PlayMechi Should Be First

PlayMechi should first become:

- A player dashboard
- + challenge board
- + match room system
- + result confirmation system
- + ranking system
- + tournament support system
- + subscription platform

3. Dashboard-First Architecture

The dashboard should be the product.

A player should log in and immediately understand:

- What can I play now?
- Who challenged me?
- Which match is active?
- Which result do I need to submit?

What tournament am I in?
What is my rank?
What plan am I on?
What should I do next?

Dashboard Home Purpose

The dashboard home should not be a landing page.

It should be a command center.

Dashboard Home Priority

The order of importance should be:

1. Play now
2. Active match
3. Pending actions
4. Open challenges
5. Rank progress
6. Joined tournaments
7. Rewards
8. Subscription status
9. Announcements
10. Streams/social content

The current Weekend Cup-style hero card can remain, but it should not dominate the dashboard. It should become a smaller featured event card.

4. Recommended Player Dashboard Layout

Top Bar

The top bar should include:

Search
Notifications
Quick Create Challenge button
Join Queue button
User avatar
Current plan badge

Example:

Welcome back, Ryanair001
Bronze III · Free Plan · 3 ranked matches left today

[Join Queue] [Create Challenge] [View Tournaments]

Main Dashboard Grid

Section 1: Play Now

This is the most important card.

Content:

Play Now
Choose a game and find an opponent.

Game: eFootball
Mode: 1v1
Type: Ranked
Platform: PlayStation

[Find Match]

This card should always be visible near the top.

Section 2: Active Match

Only show when the player has an active match.

Example:

Active Match
eFootball 1v1 vs Brian254
Status: Awaiting result
Deadline: 8:45 PM

[Open Match Room] [Submit Result] [Report Issue]

Section 3: Pending Actions

Show things the player must complete.

Examples:

Confirm result vs Brian254
Upload screenshot for Match #1021
Add your PUBG Mobile ID
Check in for Weekend Cup
Complete your profile
Upgrade to Pro to continue ranked matches

Section 4: Open Challenges

Show challenges the player can accept.

Example table:

Player	Game	Rank	Mode	Time	Action
Brian254	eFootball	Silver II	1v1	Now	Accept
JayCODM	CODM	Bronze I	2v2	8 PM	Accept
KibetFF	Free Fire	Gold III	Squad	Tonight	View

Section 5: Rank Progress

Example:

Rank Progress
Bronze III → Bronze II
2 wins needed to rank up
Recent form: W-L-W-W

Section 6: My Tournaments

Show:

Joined tournaments
Check-in status
Next match
Tournament deadline
Tournament result

Section 7: Rewards

Show:

Daily mission
Weekly mission
Current streak
Badges unlocked
Drops available

Section 8: Subscription Status

Example for Free user:

Free Plan
3 ranked matches left today
Upgrade to Pro for unlimited ranked matches, more game slots, and advanced stats.

[Upgrade to Pro]

Section 9: Announcements

This is where Weekend Cup, upcoming stream, and community drops should appear.

They should support player activity, not replace it.

5. Dashboard Sidebar

Player Sidebar

Recommended sidebar:

PLAYMECHI

Main

- Dashboard
- Play
- Challenges
- My Matches
- Tournaments
- Leaderboard

Player

- Games
- Game IDs

- Results
- Disputes
- Rewards
- Socials

Account

- Profile
- Subscription
- Payments
- Notifications
- Support

Conditional Sidebar Items

Only show these if the user has access.

Host Tools

- My Events
- Create Tournament
- Participants
- Brackets

Moderator

- Review Results
- Disputes
- Reports

Admin

- Admin Dashboard

Normal players should not see "Moderators" unless they are moderators.

6. UI Design Direction

Design Goal

The UI should feel like a real gaming operations dashboard, not an AI-generated landing page.

It should be:

Dark
Fast

Sharp
Clean
Functional
Status-driven
Action-first

It should not be:

Over-glossy
Over-gradient
Over-animated
Full of fake cards
Full of stock images
Full of random glowing sections
Generic SaaS-looking

Visual Style

Use the existing PlayMechi identity:

Dark navy background
Teal accent
Red/coral accent
White text
Soft borders
Subtle shadows
Gaming-style icons
Rounded cards
Compact tables
Status badges

Suggested Color System

Background:
#07111F or similar dark navy

Surface:
#0E1A2D
#111D31

Border :
#22334D

Primary Accent:

Teal / cyan

Danger Accent:

Coral / red

Text:

White for primary

Light gray for secondary

Muted gray for helper text

Status:

Green = confirmed / active

Yellow = pending

Red = disputed / failed

Blue = info

Purple = Pro / Elite highlight

UI Rule

Use color to communicate status, not decoration.

Every color should have a job.

Typography

Use one strong display font for headings and one clean UI font for everything else.

Recommended approach:

Headings: bold, compact, gaming feel

Body: clean, readable, simple

Buttons: short and direct

Labels: uppercase only when useful

Avoid too many font weights.

Spacing

Use consistent spacing.

Recommended spacing scale:

4px
8px
12px
16px
24px
32px
48px

Do not randomly space cards.

Cards

Every card should have one clear purpose.

Good card:

Active Match
eFootball 1v1 vs Brian254
Awaiting result · Deadline 8:45 PM
[Open Match Room]

Bad card:

Compete with the best players and unlock endless opportunities in the next generation of gaming excellence.

Cards should be scannable and actionable.

7. Anti-AI-Slop UI Rules

What To Avoid

Avoid these common AI-generated UI problems:

Huge generic hero sections inside dashboard
Random glassmorphism
Too many gradients
Fake analytics numbers
Fake users
Fake testimonials

Stock images everywhere
Cards with vague titles
Buttons that do not lead anywhere
Too much marketing copy inside logged-in areas
Overuse of emojis
Overuse of glowing borders
Random 3D icons
Inconsistent icon styles
Too many shadows
Too much vertical space
Repeated card patterns with no real data

Dashboard Copy Rules

Use short functional copy.

Good:

Submit result
Accept challenge
Find match
Check in
Upload proof
Confirm score
Open match room

Bad:

Embark on your competitive journey and unlock your gaming destiny.

Data Rules

Never show fake stats as if they are real.

If there is no data, show a useful empty state.

Bad:

1,293 active players

when the platform has no real activity.

Good:

No open challenges yet.
Create the first challenge for eFootball.
[Create Challenge]

Empty State Rules

Every empty state should include:

What happened
Why it matters
What the user can do next

Example:

No active match
You are not currently playing anyone.
Join the queue or create a challenge to start competing.

[Join Queue] [Create Challenge]

Button Rules

Use one main button per card.

Examples:

Find Match
Create Challenge
Open Match Room
Submit Result
Confirm Result
Upgrade to Pro

Avoid five equal buttons in one card.

Icon Rules

Use one icon family.

Do not mix:

Lucide icons
Font Awesome icons
Random emoji icons
3D icons
AI-generated icons

Pick one and stay consistent.

Recommended:

Lucide icons

Image Rules

Use images only where they help.

Inside the dashboard, images should be secondary.

Use images for:

Featured tournament
Community post
Stream announcement
Game cover

Do not use images for:

Every card
Every stat
Every action
Every empty state

Animation Rules

Use subtle animation only.

Allowed:

- Hover lift
- Button loading spinner
- Toast slide-in
- Modal fade
- Queue searching pulse

Avoid:

- Constant glowing
- Floating cards
- Overanimated gradients
- Random particle backgrounds
- Spinning icons

8. UI Component System

Build a component system first.

Core Components

- Button
- Card
- Badge
- Tabs
- Table
- Modal
- Drawer
- Dropdown
- Input
- Select
- Textarea
- Toast
- Avatar
- Progress bar
- Stat card
- Empty state
- Timeline
- Notification item
- Match card
- Challenge card

Tournament card
Subscription card

Status Badges

Use consistent badges:

Open
Accepted
Ready
In Progress
Awaiting Result
Awaiting Confirmation
Disputed
Finalized
Expired
Cancelled
Paid
Failed
Active
Suspended
Free
Pro
Elite

Match Card Component

MatchCard

- game
- mode
- playerOne
- playerTwo
- status
- deadline
- primaryAction

Challenge Card Component

ChallengeCard

- creator
- game
- platform
- rankRange

- scheduledTime
- status
- acceptButton

Subscription Card Component

```
SubscriptionCard
- plan
- price
- billingPeriod
- features
- currentPlan
- CTA
```

Admin Table Component

```
AdminTable
- search
- filters
- columns
- rows
- status badges
- action menu
- detail drawer
```

9. Responsive Design

Desktop

Use:

```
Sidebar left
Top bar
Main content grid
Right detail panel where useful
```

Tablet

Use:

Collapsible sidebar
Two-column card layout
Tables become compact

Mobile

Use:

Bottom navigation
Single-column cards
Sticky primary action
Simplified tables
Swipeable tabs

Mobile Bottom Navigation

Recommended mobile nav:

Dashboard
Play
Challenges
Matches
Profile

The mobile experience matters because many Kenyan gamers will access PlayMechi from phones.

10. Accessibility Rules

The dashboard should be accessible from the start.

Requirements:

Keyboard focus visible
Buttons have clear labels
Inputs have labels
Good contrast
Errors explain what happened
Forms do not rely only on color
Tables have proper headers
Modals can be closed with keyboard

Loading states are clear
Touch targets are large enough

Do not make the UI beautiful but hard to use.

11. Matchmaking System

Matchmaking Types

PlayMechi should support two types of matchmaking.

Queue Matchmaking

The player says:

Find me an opponent now.

Flow:

Player goes to /dashboard/play
Selects game
Selects platform
Selects casual or ranked
Clicks Find Match
System searches for opponent
Both players accept
Match room is created
Players play outside PlayMechi
Result is submitted
Opponent confirms
Rating updates

Challenge Board

The player says:

I want to create a challenge and wait for someone to accept.

Flow:

Player goes to /dashboard/challenges
Clicks Create Challenge
Selects game, mode, platform, rank range, time
Challenge appears on open board
Another player accepts
Match room is created
Players play
Result is submitted and confirmed
Ranking updates

Matchmaking Filters

Use:

Game
Platform
Region
Rank
Availability
Trust score
Match history
No-show rate
Subscription level where applicable

Early MVP Matching Rules

Match similar ranks first
Widen rank range after waiting
Avoid players with recent disputes against each other
Avoid high no-show users
Allow rematch after completion

12. Challenge System

Challenge Types

Challenge Type	Description
Open Challenge	Anyone eligible can accept

Challenge Type	Description
Direct Challenge	Invite a specific player
Scheduled Challenge	Match set for later
Rematch	Challenge previous opponent
Tournament Challenge	Match connected to a tournament
Clan Challenge	Team or group-based challenge later

Challenge Fields

When creating a challenge, ask for:

Game
Mode
Platform
Casual or Ranked
Preferred time
Rank range
Notes
Proof requirements
Expiry time

Challenge Statuses

Draft
Open
Accepted
Expired
Cancelled
Converted to Match

13. Match Room

The match room is one of the most important product pages.

Route:

```
/dashboard/matches/[matchId]
```

Match Room Should Show

```
Match ID  
Player 1  
Player 2  
Game  
Platform  
Mode  
Match status  
Rules  
Deadline  
Game IDs  
Lobby code if available  
Result submission  
Screenshot upload  
Chat/comments  
Dispute button  
Moderator decision if disputed
```

Match Room Statuses

```
Waiting for players  
Ready  
In progress  
Awaiting result  
Result submitted  
Awaiting confirmation  
Disputed  
Finalized  
Voided
```

Match Room Actions

Player can:

```
View opponent details  
Copy game ID  
Submit result  
Upload screenshot  
Confirm result
```

Dispute result
Report no-show
Request rematch
Contact support

14. Result Submission

Because matches happen outside PlayMechi, result verification is critical.

Result Modes

Mutual Confirmation

Best for normal 1v1 matches.

Flow:

Winner submits score
Opponent confirms
Match finalizes
Rating updates

Screenshot Proof

Best for ranked matches and tournaments.

Require:

Score screenshot
Opponent name if visible
Match time
Game ID or lobby ID where possible

Moderator Review

Used when players disagree.

Moderator reviews:

- Scores
- Screenshots
- Match history
- Comments
- User trust score
- No-show history

Result Statuses

- Not submitted
- Submitted
- Confirmed
- Auto-confirmed
- Disputed
- Rejected
- Finalized

Auto-Confirmation Rule

If a player submits a result and the opponent does not respond within a set time, the result can auto-confirm unless disputed.

Suggested window:

- Casual match: 30 minutes
- Ranked match: 60 minutes
- Tournament match: admin-defined

15. Dispute System

Dispute Reasons

Players can dispute when:

- Opponent submitted wrong score
- Opponent did not show up
- Screenshot is fake
- Wrong game ID was used
- Match was played outside the time window

Opponent disconnected
Opponent used abusive language
Rules were broken

Dispute Page

Route:

/dashboard/disputes

Player sees:

Open disputes
Dispute status
Required evidence
Moderator decision
Penalties if any

Admin Dispute Decisions

Admin/moderator can decide:

Player A wins
Player B wins
Void match
Rematch required
No-show loss
Both players penalized
Warning issued
Account suspended

Penalties

Possible penalties:

Warning
Rank points penalty
Temporary ranked ban
Tournament ban

Account suspension
Permanent ban for fake evidence or repeated fraud

16. Ranking System

Use a simple visible rank system supported by hidden rating points.

Public Ranks

Bronze III
Bronze II
Bronze I

Silver III
Silver II
Silver I

Gold III
Gold II
Gold I

Platinum III
Platinum II
Platinum I

Diamond III
Diamond II
Diamond I

Legend

Hidden Rating

Behind the scenes:

New user starts at 1000 rating
Win gives points
Loss removes points
Beating stronger players gives more points
Losing to weaker players removes more points

No-show removes points
Disputes and false results affect trust score

Game-Specific Rankings

Each game should have its own rating.

Example:

```
Ryanair001  
eFootball: Silver II  
CODM: Bronze I  
Free Fire: Unranked
```

Leaderboard Types

Inside `/dashboard/leaderboard`, include:

```
Overall leaderboard  
Game leaderboard  
Weekly leaderboard  
Monthly leaderboard  
Friends leaderboard  
Pro leaderboard  
Elite hosts leaderboard  
Most active players  
Best win streaks  
Rising players
```

17. Subscription Strategy

PlayMechi should offer daily, weekly, and monthly options.

Daily and weekly options are important because many players may not want to commit to monthly billing immediately.

Subscription Naming

Use simple names:

Free
Pro Daily
Pro Weekly
Pro Monthly
Elite Daily
Elite Weekly
Elite Monthly

Alternatively, call daily/weekly products “passes”:

Pro Day Pass
Pro Weekly Pass
Pro Monthly
Elite Day Pass
Elite Weekly Pass
Elite Monthly

This may be clearer because daily and weekly access can be bought as one-time access first before full recurring billing.

Recommended Pricing

Free

KES 0

Pro

Pro Daily: KES 20/day
Pro Weekly: KES 70/week
Pro Monthly: KES 199/month

Elite

Elite Daily: KES 50/day
Elite Weekly: KES 199/week
Elite Monthly: KES 699/month

Why These Prices Work

The daily pass lowers the barrier.

The weekly pass is good for players who only compete during weekends.

The monthly plan gives the best value and should be the main plan.

Pricing Psychology

Make monthly look like the best deal.

Example:

```
Pro Daily: KES 20
Pro Weekly: KES 70
Pro Monthly: KES 199
```

A player who buys Pro Daily many times will realize monthly is better.

Example:

```
Elite Daily: KES 50
Elite Weekly: KES 199
Elite Monthly: KES 699
```

Elite monthly should be positioned for hosts and serious players.

18. Subscription Features

Free Plan

Free must be useful because it grows the community.

Free Features

```
5 ranked matches per day
Unlimited casual challenges
1 selected main game
Join public tournaments
Basic leaderboard access
10-match history
Basic player profile
Basic stats
Result submission
```

Dispute access
Basic notifications

Free Dashboard Message

Free Plan
You have 3 ranked matches left today.
Upgrade to Pro for unlimited ranked matches, more game slots, and advanced stats.

Pro Plan

Pro is for active players.

Pro Pricing

KES 20/day
KES 70/week
KES 199/month

Pro Features

Unlimited ranked matches
Up to 3 selected games
Unlimited casual challenges
Advanced match history
100-match history
Pro badge
Advanced stats
Priority challenge visibility
Scheduled challenges
Rematch shortcuts
Custom profile banner
Early access to selected tournaments
Reduced tournament service fee where applicable
Priority notifications
Verified-only queue later

Pro Stats

Pro users should see:

Win rate by game
Current streak
Best streak
Rank movement
Most played opponent
Monthly form
Recent performance graph
Game-specific performance

Pro Dashboard Message

Pro Active
Unlimited ranked matches unlocked.
3 selected games enabled.
Advanced stats available.

Elite Plan

Elite is for serious players, hosts, clans, and creators.

Elite Pricing

KES 50/day
KES 199/week
KES 699/month

Elite Features

Everything in Pro
Host tournaments
3 fee-free hosted tournaments per month
Custom tournament pages
Clan/team page
5+ selected games or unlimited selected games
Unlimited match history
CSV export
Elite badge
Priority support
Featured profile placement
Featured tournament placement
Stream card access

Community drops tools
Host dashboard
Early access to new features
Private community events
Sponsor placement tools later

Elite Dashboard Message

Elite Active
Host tools unlocked.
You can create tournaments, manage participants, export results, and feature your events.

Elite Should Not Be Pay-To-Win

Elite should not give:

Easier opponents
Fake rank boosts
Free wins
Unfair leaderboard advantage

Elite should give:

Hosting power
Better tools
More visibility
Better analytics
Better support
Community features

19. Subscription Comparison Table

Feature	Free	Pro Daily	Pro Weekly	Pro Monthly	Elite Daily	Elite Weekly	Elite Monthly
Price	KES 0	KES 20	KES 70	KES 199	KES 50	KES 199	KES 699
Duration	Forever	24 hrs	7 days	30 days	24 hrs	7 days	30 days

Feature	Free	Pro Daily	Pro Weekly	Pro Monthly	Elite Daily	Elite Weekly	Elite Monthly
Ranked Matches	5/day	Unlimited	Unlimited	Unlimited	Unlimited	Unlimited	Unlimited
Casual Challenges	Unlimited	Unlimited	Unlimited	Unlimited	Unlimited	Unlimited	Unlimited
Selected Games	1	3	3	3	5+	5+	5+
Match History	10	100	100	100	Unlimited	Unlimited	Unlimited
Advanced Stats	No	Yes	Yes	Yes	Yes	Yes	Yes
Badge	No	Pro	Pro	Pro	Elite	Elite	Elite
Schedule Challenges	Limited	Yes	Yes	Yes	Yes	Yes	Yes
Priority Challenge Visibility	No	Yes	Yes	Yes	Yes	Yes	Yes
Host Tournaments	No	No	No	No	Yes	Yes	Yes
Fee-Free Hosted Tournaments	No	No	No	No	No	1/week	3/month
CSV Export	No	No	No	No	Yes	Yes	Yes

Priority Support	No	Limited	Limited	Limited	Yes	Yes	Yes
Featured Profile	No	No	No	No	Limited	Yes	Yes
Stream Tools	No	No	No	No	Yes	Yes	Yes

20. Subscription Implementation

Recommended Billing Logic

Use two types of access:

One-Time Passes

Good for:

Daily Pro
Weekly Pro
Daily Elite
Weekly Elite

These can be sold like access passes.

A user pays once and gets access until expiry.

Recurring Subscription

Good for:

Pro Monthly
Elite Monthly

Monthly subscriptions can be recurring where payment provider support allows it.

Subscription Statuses

Free
Trial
Active
Expiring Soon
Expired
Cancelled
Payment Failed
Grace Period

Access Rules

When a player buys a pass or subscription:

Set plan_level
Set plan_started_at
Set plan_expires_at
Unlock plan features
Show plan badge
Track renewal or expiry

Expiry Rules

When plan expires:

Return user to Free
Keep match history but lock advanced history view
Keep badge in history but remove active badge
Disable Pro/Elite-only actions
Show renew CTA

Plan Upgrade Rules

If user upgrades before expiry:

Apply higher plan immediately
Extend expiry fairly if possible
Show confirmation

Plan Downgrade Rules

If user downgrades:

Let current paid access continue until expiry
Apply lower plan after expiry
Do not delete user data
Only lock access to premium views

21. Payment and Compliance Position

For the first version, payments should focus on:

Subscriptions
Daily passes
Weekly passes
Monthly plans
Tournament registration where approved

Avoid at launch:

Player-vs-player cash staking
Winner-takes-pot challenges
Wallet deposits
Wallet withdrawals
Random cash rewards
Paid lucky draws
Cash Ludo
Double-your-money language

Safe Product Language

Use:

Compete, rank up, join tournaments, and unlock rewards.

Avoid:

Stake money and win cash instantly.

Important Rule

Do not scale entry-fee plus prize mechanics until legal and payment provider approval is confirmed.

22. Admin Dashboard Design

Admin Dashboard Goal

The admin dashboard should help PlayMechi staff control the platform.

Admins should be able to:

- Monitor active matches
- Resolve disputes
- Verify results
- Manage users
- Manage subscriptions
- Manage tournaments
- Review payments
- Detect fraud
- Control dashboard content
- Manage games
- Manage moderators

Admin Visual Style

Use the same PlayMechi style, but more operational.

Admin UI should be:

- Compact
- Data-heavy
- Table-focused
- Filterable
- Fast
- Status-driven
- Less decorative than player dashboard

Admin Sidebar

PLAYMECHI ADMIN

Overview

- Admin Home
- Live Activity
- Alerts

Players

- Users
- Profiles
- Game IDs
- Trust Scores

Competition

- Matches

- Challenges
- Results

Main Right:
Dispute Queue
Risk Alerts
System Announcements

Admin Tables

Every admin table should have:

Search
Filters
Status badges
Bulk actions
Export button where needed
View details drawer
Admin notes

23. Admin User Management

Admin user page should show:

- Username
- Email/phone
- Plan
- Rank
- Games
- Matches played
- Win/loss
- Disputes
- No-shows
- Trust score
- Account status

User Statuses

- Active
- Limited
- Suspended
- Banned
- Under Review
- Deleted

Admin User Actions

Admin can:

- View profile
- Edit username if needed
- Reset selected games
- Change plan manually
- Suspend account
- Ban account
- Reset rank
- Add note
- View payment history
- View dispute history

24. Admin Match Management

Admin can open any match and see:

- Full match details
- Player profiles
- Game IDs
- Submitted results
- Screenshots
- Chat/comments
- Timeline
- Previous disputes
- Trust scores
- Moderator notes

Admin Match Actions

Admin can:

- Finalize result
- Void match
- Force rematch
- Penalize player
- Extend deadline
- Lock match
- Reopen match
- Message players
- Assign moderator

25. Admin Roles

Roles

Role	Access
Super Admin	Full platform access
Admin	Most management tools
Moderator	Results, disputes, reports
Tournament Host	Own tournament only

Role	Access
Support Agent	Tickets, user support, payment support
Content Manager	Banners, announcements, social cards

Moderator Can

Review results
Resolve disputes
View match evidence
Issue warnings
Escalate users

Moderator Cannot

Access full revenue data
Change subscriptions
Delete users
Change system settings

Tournament Host Can

Manage own tournament
Approve participants
Update bracket
Post announcements
Review own tournament results

Tournament Host Cannot

Access all platform users
See all payments
Suspend users globally
Edit other tournaments

26. Codex Implementation Approach

Codex should not be asked to “make the dashboard beautiful” in one vague prompt.

That leads to AI slop.

Codex should be given small, structured engineering tasks with clear UI rules, file targets, acceptance criteria, and screenshots or existing design references.

Codex Working Method

Use this process:

1. Create a product spec
2. Create a design system spec
3. Create database schema
4. Create route map
5. Create component list
6. Build components first
7. Build pages from components
8. Add real empty states
9. Add loading/error states
10. Test flows
11. Review UI manually
12. Refactor

Codex Should Work in Phases

Do not ask Codex to generate everything at once.

Use phases:

- Phase 1: Design system
- Phase 2: Dashboard shell
- Phase 3: Player profile and game IDs
- Phase 4: Challenge board
- Phase 5: Match room
- Phase 6: Result submission
- Phase 7: Rankings and leaderboard
- Phase 8: Subscriptions
- Phase 9: Admin dashboard
- Phase 10: QA and cleanup

Codex Prompting Rule

Every Codex task should include:

Goal
Files to edit
Files not to edit
UI style rules
Data requirements
States required
Acceptance criteria
Testing instructions

Bad Codex Prompt

Build me a modern gaming dashboard with matchmaking and subscriptions.

This is too vague and will likely create generic AI UI.

Good Codex Prompt

Build the /dashboard/play page using the existing PlayMechi dashboard shell.

Requirements:

- Keep the current dark navy PlayMechi style.
- Do not create a giant marketing hero.
- Use compact action-first cards.
- Add a Play Now card with game, platform, mode, match type, and Find Match button.
- Add an empty state for no active queue.
- Add loading, error, and success states.
- Use existing Button, Card, Badge, Select, and Tabs components.
- Do not introduce new colors outside the design tokens.
- Do not add stock images.
- Do not use fake player counts.
- Make the page responsive.
- Add basic tests if the project has test setup.

Acceptance criteria:

- User can select a game.
- User can select ranked or casual.
- User can click Find Match.
- Empty state appears when no queue is active.
- UI matches existing dashboard spacing and typography.

27. Codex Task List

Task 1: Create Design Tokens

Codex task:

Create a PlayMechi design token file for colors, spacing, radius, shadows, typography, and status colors.

Do not change the current brand identity.

Use dark navy surfaces, teal primary accent, coral danger accent, and clean readable text colors.

Replace hardcoded random colors where safe.

Output:

```
tokens.ts
theme.ts
globals.css updates
```

Task 2: Build Core Components

Codex task:

Create reusable dashboard components:
Button, Card, Badge, Tabs, Table, EmptyState, StatCard, MatchCard, ChallengeCard, SubscriptionCard, PageHeader.

Use existing design style.

No stock images.

No fake decorative gradients.

Each component must support loading and empty states where relevant.

Task 3: Build Dashboard Shell

Codex task:

Build the dashboard shell with sidebar, topbar, content area, and responsive mobile layout.

Sidebar groups:

Main, Player, Account.

Hide Admin, Moderator, and Host sections unless user role allows them.

Task 4: Build Dashboard Home

Codex task:

Rework /dashboard into an action-first player command center.

Top order:

1. Welcome + quick actions
2. Play Now
3. Active Match
4. Pending Actions
5. Open Challenges
6. Rank Progress
7. My Tournaments
8. Rewards
9. Announcements

Do not place a large marketing hero at the top.

Task 5: Build Play Page

Route:

/dashboard/play

Codex task:

Create the Play page where users select game, platform, mode, and match type before entering queue.

Task 6: Build Challenge Board

Route:

/dashboard/challenges

Codex task:

Create challenge board with tabs:
Open, My Challenges, Sent, Received, Completed, Disputed.

Add create challenge modal.
Add filters for game, platform, rank, and time.

Task 7: Build Match Room

Route:

```
/dashboard/matches/[matchId]
```

Codex task:

Create match room page with players, game IDs, rules, deadline, result submission, screenshot upload, confirm result, dispute result, and timeline.

Task 8: Build Results Flow

Routes:

```
/dashboard/results  
/dashboard/matches/[matchId]
```

Codex task:

Implement result submission, opponent confirmation, auto-confirmation state, and dispute trigger.

Task 9: Build Subscription Page

Route:

```
/dashboard/subscription
```

Codex task:

Create subscription page with Free, Pro Daily, Pro Weekly, Pro Monthly, Elite Daily, Elite Weekly, Elite Monthly.

Show current plan, expiry date, features, upgrade CTA, and payment status.

Task 10: Build Admin Dashboard

Route:

/admin

Codex task:

Build admin dashboard shell and overview with metric cards, live matches table, pending results, dispute queue, risk alerts, and quick filters.

28. Codex UI Quality Checklist

Before accepting any Codex-generated UI, check:

- Does it look like PlayMechi, not generic SaaS?
- Is there one clear primary action per card?
- Are there real empty states?
- Are loading states included?
- Are error states included?
- Are fake numbers removed?
- Are colors from tokens?
- Are icons consistent?
- Is spacing consistent?
- Is mobile usable?
- Are admin-only items hidden from players?
- Are dashboard pages action-first?
- Are public pages marketing-first?
- Are buttons connected to real routes/actions?
- Does it avoid random gradients and glow effects?
- Does it avoid stock image dependency?

Manual Review Rule

Never accept Codex UI without manually reviewing the screen.

Codex can build fast, but product taste must come from you.

29. Suggested Tech Structure

This assumes a modern Next.js-style app.

Suggested Route Structure

```
app/  
  page.tsx  
  home/  
  how-it-works/  
  pricing/  
  support/  
  dashboard/  
    layout.tsx  
    page.tsx  
  play/  
  challenges/  
  matches/  
    page.tsx  
    [matchId]/  
  tournaments/  
  leaderboard/  
  games/  
  game-ids/  
  results/  
  disputes/  
  rewards/  
  socials/  
  subscription/  
  payments/  
  profile/  
  notifications/  
  support/  
  admin/  
    layout.tsx  
    page.tsx  
    users/  
    matches/
```

```

31. MVP Build Order

Week 1: Design System and Dashboard Shell

Build:

```
Design tokens
Core UI components
Dashboard layout
Sidebar
Topbar
Responsive layout
Empty state components
```

Goal:

The dashboard has a consistent foundation.

Week 2: Player Setup

Build:

```
Profile
Game selection
Game IDs
Subscription status card
Notifications base
```

Goal:

Players can create a real gaming profile.

Week 3: Challenge Board

Build:

```
Create challenge
Open challenges
Accept challenge
Cancel challenge
Challenge filters
Challenge expiry
```

Goal:

Players can find opponents manually.

Week 4: Match Rooms

Build:

```
Match room page
Match status
Game IDs display
Rules display
Result submission
Screenshot upload
Confirmation flow
```

Goal:

Every match has a clear home.

Week 5: Results and Ranking

Build:

```
Confirm result
Auto-confirm result
Basic dispute
Rating update
Match history
Leaderboard
```

Goal:

Players can compete and progress.

Week 6: Subscriptions

Build:

```
Free limits
Pro Daily
Pro Weekly
Pro Monthly
Elite Daily
Elite Weekly
Elite Monthly
Payment records
Feature locking
Upgrade prompts
Expiry logic
```

Goal:

Start monetizing active users.

Week 7: Admin Dashboard

Build:

```
Admin overview
User management
```

- Match management
- Result review
- Dispute queue
- Tournament management
- Payments overview
- Content banners

Goal:

PlayMechi can operate safely.

Week 8: Private Beta

Invite:

50-100 players

Start with:

- eFootball
- EA FC
- CODM

Track:

- Matches created
- Matches completed
- Disputes
- No-shows
- Subscription interest
- UI confusion
- Mobile usability

32. Launch Offer

Public Message

PlayMechi Matchmaking Beta is live.

Create your player profile, challenge opponents, enter ranked matches, submit results, and climb the leaderboard.

Free players get 5 ranked matches per day.

Pro unlocks unlimited ranked matches and advanced stats.

Elite unlocks host tools and tournament features.

Launch Offer

First 500 players get 7 days Pro free.

Pricing

Free: KES 0

Pro Daily: KES 20

Pro Weekly: KES 70

Pro Monthly: KES 199

Elite Daily: KES 50

Elite Weekly: KES 199

Elite Monthly: KES 699

Socials connected
Rewards completed
Returning players
Featured players

34. Final Recommendation

Build PlayMechi as a dashboard-first matchmaking platform.

The dashboard should contain all player activity.

Public pages should only support the dashboard.

Start with:

```
Player profiles
Game IDs
Challenge board
Match rooms
Result confirmation
Ranking
Subscriptions
Admin moderation
```

Do not start with custom Ludo yet.

Do not start with risky cash-stake matches yet.

Start with structure, trust, match history, ranking, and community activity.

The strongest PlayMechi path is:

```
Dashboard-first matchmaking
→ Challenge board
→ Match rooms
→ Rankings
→ Daily/weekly/monthly Pro access
→ Elite host tools
→ Tournaments
→ Custom games later
```

The dashboard should make every player ask:

```
Who can I play now?
What match do I have?
What rank am I?
What result do I need to submit?
```

What tournament am I joining?
What can I unlock next?

That is the product.
